

INNfinity Automates the Bed Request

INNfinity Software Systems announces the release of a new product- the Housing Manager/Lodge Link Interface, for use with INNfinity V2 camp management software, that automates the bed request process between camp/lodge manager and paying client/contractor. Reservations can be created and manipulated in real-time by the paying client eliminating the need to send a bed request to the lodge manager. INNfinity V2 further empowers the paying client with user-definable reports to monitor lodge allotments. Meanwhile, managers can rest easy, as access to the interface is tightly secured and subject to user-definable business rules. With this level of control and detail at the fingertips of the paying client, the paper trail is eliminated, saving time and work for both manager and client. Can't sleep? Up late counting bed requests? Ditch the sheep. Find peace with INNfinity V2's new Housing Manager/Lodge Link Interface.

Reservations

Managing reservations within an internally/externally managed lodge/camp is easily accomplished with INNfinity V2's new interface. No bed request required. For example, PTI Group, a supplier of remote-site workforce lodge accommodations, allocates a block of rooms to its paying client- Suncor Energy. Suncor Energy can login into the INNfinity Housing Manager/Lodge Link Interface, a web asp.net application, and view the real-time occupancy and availability of their lodge allotment-

located in PTI's facility. Here Suncor can ensure maximum utilization of their allotments. The view from the Housing Manager/Lodge Link Interface can be further drilled-down to monitor allotments at a contractor level. With the big picture in sight, Suncor Energy can easily create, view, cancel, and change reservations in real-time through the Housing Manager/Lodge Link Interface without the time-consuming process of sending a bed request to PTI and waiting for an approval. Alternatively, PTI is no longer stamped by a herd of bed requests from Suncor to corral one-by-one into INNfinity V2. By streamlining the bed request process, PTI and Suncor can easily see without their glasses a

Security

Because INNfinity V2's Housing Manager/Lodge Link Interface offers direct access to lodge allotments to the paying client, security is crucial to protect both client and lodge manager. Access to the interface is granted by an authenticated login in a secure environment. Once in the Housing Manager/Lodge Link Interface, functionality is limited to the role-based security level of the user. Permission is restricted to their specific lodge allotment. For example, Suncor can only view their allotment within PTI's lodge. PTI, the lodge manager, allows Suncor to make changes to their internal camp reservations up to 24 hours prior to

INNfinity V2 sends the Bed Request to its final resting place

significant savings in time, workload, and paper reflected in their bottom lines.

Reports

In addition to reservation management, INNfinity's Housing Manager/Lodge Link Interface provides a portfolio of user-definable reports to the paying client. Suncor Energy can opt to monitor their service days for a given time period, rooms in-house versus those on time-out, booking pace, and occupancy analysis. In addition to custom reports, all transactions are recorded with a timestamp and employee name/number. At any time, a manager can review what was booked, changed, or cancelled and by whom. INNfinity V2's new Housing Manager/Lodge Link Interface provides Suncor Energy with the essential details to efficiently manage their camp allotments.

arrival date. Once the timing threshold is reached, subsequent changes to Suncor's internal lodge are made by PTI staff only to eliminate any surprises at the front desk. With enforceable business rules and tight security, INNfinity V2's Housing Manager/Lodge Link Interface provides a safe, user friendly environment for lodge allotment management.

INNfinity V2 software streamlines camp/lodge management by allowing paying clients/contractors to safely access and manage their internal allotments, eliminating the time and cost of bed requests. With allotment details at your fingertips and bed requests in the past, what will you do with your free afternoons? INNfinity.
