

INNfinity: A Custom Software Solution for Lodges

Executive Lodges

Remote Sites in Canada

PTI Group is one of the world's largest suppliers of remote site services in some of the harshest environments. PTI Group is considered a leader in their field, as they escalate the remote camp environment to an executive lodge experience. These lodges are home to many of Canada's oil executives and workers. With an increase in new drilling sites, PTI Group is able to immediately accommodate the demand for housing by increasing the size of existing camps for permanent and temporary sites. Year round occupancy is 98—100%.

About PTI Group

PTI is dedicated to accommodating the businesses that house their employees in PTI's executive lodges. They strive to provide amenities such as satellite internet service, game rooms, exercise gym, world-class meals and confectionary item sales to enhance the executive guest experience. PTI's property management software choice is INNfinity Software System's newest product- INNfinity V2.

A Flux System

In addition to building remote site services, PTI must keep up with the flux in schedules of the thousands of on-site oil workers. Oil workers often work several days or weeks at a time, leave for a couple of days, and return for another long stretch. PTI bills oil companies for accommodations and additionally for the days workers enjoy meal service at PTI. The days in which workers have meal service are known as *service days*. PTI was looking for a system to automate, record, and forecast service days. INNfinity Software Systems was able to engineer such a system.

A Seamless Service Solution

Service days were difficult for PTI to determine. Initially, it was up to Housekeeping to physically enter

hundreds of rooms each day to determine if a worker had occupied the room the previous evening. Based on their findings, Accounting manually calculated a bill for each oil company, including a breakdown of room charges and service days for each employee. INNfinity was able to provide an automated solution. INNfinity designed a custom interface to read PTI's existing security card system. Each worker must swipe his security card when entering the restaurant and/or his room. Based on the swipe, INNfinity V2 was able to record the service day and route the charge to the appropriate oil company account. This custom interface saved PTI thousands of hours in labor costs and eliminated billing errors. PTI generated flawless bills in record time. The faster they generated invoices, the faster they received payment from the oil companies. Furthermore, INNfinity offered reports that forecasted service days, based on worker schedules, allowing for the creation of an accurate budget for accommodations, meal preparation, and supplies. PTI's largest site, the Executive Lodge at Athabasca, boasts 1,800 rooms-many of which are shared. Just imagine incredible impact INNfinity V2 had on PTI's executive lodge business.

INNfinity V2- A Custom Fit for PTI Group

PTI Group installed INNfinity V2 in its Canadian permanent executive lodges in Northern Alberta. INNfinity created a Custom Slide-out to detail service days and altered V2's one-screen design to accommodate PTI's unique needs. Customize your INNfinity V2 software to suit the nuances of your lodge/camp management business. Discover options to satiate each and every department and reduce your bottom line.
